To: Clarice Lilbert and Chauncy Todd,
From: Sheila Ivers
Subject: Mining Permit
No. of Pages: 3
Date: 4-46-97

Enclosed is our permit addendum to the items we discussed on the 15th. I think everything is included, but let me know if there is anything else you need.

We are hoping that we can get the exclusionary permit Chauncy mentioned which would indeed speed things up, and that we will be ready to go no later than July 15th. If there is anything else we can do, please let us know, and thank you for all your cheerful help.

Cordially,

Sheila Ivers

Re: Mining Proposal for claims in the Blind Stream area

From: Sheila Ivers, Floyd Anderson and Jeffrey Keith
Managers of HMA, LLC
Honeycomb Mining Associates, LLC.

HoneyComb Mining Associates, LLC seeks approval to begin mining on the Blind Stream Claims, Nos. 1 through 4, Section 28, T2N, R8W in the Blind Stream Area of the Ashley National Forest.

We submit the following addendum to our mining plan submitted to the Ashley National Forest on March _____

1. A map of the area is included which designates the location of the mine and the access road which reaches the site.

2. An entry gate will be place at the beginning of the mining road which will prohibit non-mining vehicular traffic beyond that point. In addition to the locked gate, a Forest Service Closure Notice will be posted to notify people of this restriction of vehicles. The area will not be closed to hiking.

Keys to the gate will be given only to Forest Service Personnel and Honeycomb Mining Associates personnel.

3. The access road to this area will be improved at specific locations as needed to permit the safe passage of equipment and other traffic.

4. We will us a medium size trackhoe and a fifteen ton truck for a period of approximately three months during the summer and fall periods of the year.

APR-26-97 SAT 12:22 PM AMERICAN JEWELERS+GEMOLO 8014874335

P.83

5. Mining will involve small sections of approximately one-half acre and involve an estimated removal of approximately 2000 tons of rock per year.

~ 1500 cu Yds

6. Top soil will be set aside for the replacement and partial recontouring and revegetation of the area once mining operations have been completed. Such work will be completed near the end of the season, if possible, to facilitate most effective growth for the following year.

7. We do not anticipate the use of any explosive materials except small units used in a series of small holes for splitting large rock. Subsequently, there will be no storage of explosives on-site. The forest service will be notified and consulted before the use of any explosive material.

8. A bond will be posted to cover reclamation and revegetation cost as determined by the Forest Service.

9. Re-seeding of disturbed areas will be done with a seed mixture that is suitable for the area as specified by the forest service.

*Ranger Approved operation for 1 year to take up to
500 Tons.*
